Good morning.

I'm going up to the site to see what the final toll will be. Obviously, import of additional borrow will be affected (along with continuing restoration) for a couple of days. Hopefully, we can resume backfilling cleared grids in the alleyway by Tuesday.

We should resume excavations along the drainage ditches on E. Cottonwood and Cedar (Team 1). The TSCA grids should also be addressed beginning tomorrow as well (Team 2). The final removal activity will be T&D with 7 end-dumps running for the majority of the week (Team 3).

Your concerns regarding the grids adjacent to the trees are noted. Given these concerns, and that the tree removal company will in all likelihood not be HAZWOPER trained, it may be in our best interests to work down the soil stockpile and backfill the lot adjacent. This would at least provide a "cleared" route to access the trees and remove them.

The two excavation teams will also perform restoration as conditions allow. If we can get a few days without any additional adverse weather, we should be in good shape by week's end.

Thanks,

Don

Don:

I want to make sure that we do not restore FJD03-02 and FJD03-04 prior to removing the trees and the root balls. Also, I want to make sure that we leave a buffer around FJD03-06 (TSCA Grid) until that is completely excavated.

Please let me know tactically how you are going to work your teams next week.

Thanks
